

IQverify™

Video Alarm Verification System

Low-Cost Video Alarm Monitoring over the Internet

IQverify™ is a complete Video Alarm Verification System for central station monitoring or remote viewing of events over a LAN, WAN or the internet. Designed for simplicity, IQverify fits seamlessly into any Central Station or monitoring facility and eliminates the need for costly, proprietary hardware and software required by other remote video systems.

Installation and operation are a snap and the simple browser-based user interface requires no special training, simply browse to IQverify and view high-quality live and recorded images simultaneously. IQverify stores multiple events in the camera including pre/post event images and creates industry-standard AVI clips that can easily be emailed or exported.

Simple User Interface to view Live and Event images simultaneously.

IQverify Includes:

High Resolution Network Camera with on-camera storage

Professional Quality Varifocal Lens

Power-Over-Ethernet Adapter with Power Supply

Easy AVI Export

IQinvision 

When you can't afford to miss a thing.
